## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 11-14, 16, 17, 20, 21 and 32-33 are rejected under 35 U.S.C. 102(b) as being anticipated by Messenger (USPAP 2002/0136065).

With respect to claims 1-5, Messenger discloses, in Fig. 3, a circuit comprising: “a comparing means (3)”; “a reference voltage (at node J)”; “a driving signal (output of 3)”; “an internal voltage driving means (Tr)”; “an internal voltage detecting means (R’1-R’3 and 4 less T4)”; “an active signal (Vcc)”; “a second driving signal (at gate of T4)”; and “an overdriving control means (T4), all connected and operating similarly as recited by Applicant.

With respect to claims 11-14, 16, 17, 20 and 21, Messenger discloses, in Fig. 3, a circuit comprising: “a first comparing means (3)”; “a reference voltage (at node J)”; “a driving signal (output of 3)”; “an internal voltage driving means (Tr)”; “a voltage dividing means (R’1-R’3)”; “an active signal (Vcc)”; “a second comparing means (4 less T4 )”; “a second driving signal (at gate of T4)”; and “an overdriving control means (T4), all connected and operating similarly as recited by Applicant.

With respect to claims 32-33, clearly the above circuit to Messenger will provide the recited method.

Art Unit: 2816

Examiner has fully considered Applicant's remarks for the above rejection and has not found them to be persuasive. Contrary to Applicant's remarks, clearly when Vout drops to a voltage "less than or equal to a target voltage", this will cause the voltage at node E3 to drop below the threshold of T3 (to which the "target voltage" corresponds), turning it off. With T3 off, inverter INV2 will provide an "active signal" to turn on T4. Since the reference to Messenger still meets the claim language, the rejection is hereby maintained.

Claims 7-10, 18, 19, 22 and 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
